

Water in the country

To increase the yields of agricultural crops, farmers use fertilizers. Cultivated plants are protected against pests and diseases by various means.

Task No.1

Match the names of the resources used in agriculture with a description of their use.

FERTILIZERS	1. destroy the weeds around the cultivated plants, so that they do not drain their water and nutrients
INSECTICIDES	2. they support the growth of plants and increase their yield
HERBICIDES	3. collective name for means, which also includes means for protectiing plants against weeds, pests...
PESTICIDES	4. exterminate insects that could harm cultivated plants

Task No.2

Read about the possibility of home production of natural fertilizers.
